## Corrigendum

## Corrigendum to “Optimization of hydrolytic and oxidative enzyme methods for ecosystem studies” [Soil Biol. Biochem. 43 (2011) 1387–1397]

On page 1392, equation three is shown incorrectly. It should read as follows:

$$\text{Emission Coeff. (Fluorescence nmol}^{-1}\text{)} = \frac{\text{Standard Fluorescence}}{\text{Standard concentration} \left( \frac{\text{nmol}}{\text{mL}} \right) \times \text{Volume of Standard (mL)}}$$

The same problem arises for equation five, which should be written as follows:

$$\text{Emission Coeff. (Fluorescence nmol}^{-1}\text{)} = \frac{\text{Standard Curve Slope} \left[ \frac{\text{Fluorescence}}{\frac{\text{nmol}}{\text{mL}}} \right]}{\text{Standard Volume (mL)}}$$

The division of the slope by the standard volume can be eliminated if this step is done ahead of time and the slope is calculated as Fluorescence nmol<sup>-1</sup> directly (similar to equation three).
